

## เข้า Controller Controller

1. คลิก Configure
2. เลือก Network
3. เลือกแท็บ Syslog
4. ใส่ IP Log ที่ต้องการ

**\*\* Syslog Port คือ เลขพอร์ตของ Log หรือเซิร์ฟเวอร์ \*\***

The screenshot shows the iNSTAT KIOSK configuration interface. On the left is a dark sidebar menu with the following items: Dashboard, Coupons, Report, Configure (circled with '1'), System, Network (circled with '2'), Mikrotik, Printer, Maintenance, and Logout. The main content area has two tabs: 'Controller' and 'Syslog' (circled with '3'). Below the 'Syslog' tab is a form titled 'Input the Syslog IP and Port'. The form has two input fields: 'IP Address' with the value '192.168.234.2' and a sub-label 'IP address for syslog, for example 192.168.234.2'; and 'Port' with the value '514' and a sub-label 'Port, for example 514'. The entire form area is circled with '4'. At the bottom right of the form are two buttons: 'Cancel' and 'Save' (circled with '5').

## 5. กด Save

The screenshot shows the iNSTAT KIOSK interface with the 'Controller' and 'Syslog' tabs. A green success message box is displayed in the center, containing the text: 'The syslog server was successfully updated.'
